Education

BITS Pilani, Hyderabad Campus M.E. Computer Science CGPA: 8.53	2024 – 2026
IIT Madras Foundation in Data Science and Programming CGPA: 5.75	2022 – 2024
Sharda University B.Tech. Computer Science Engineering CGPA: 7.97	2020 – 2024

Technical Skills

Languages: Java, Python, SQL, Scala, C, C++
Backend & systems: Spring Boot, REST APIs, Microservices, Distributed Systems, Akka, gRPC, Event-Driven Architecture
Data & databases: BigQuery, Apache Airflow, Apache Kafka, ETL, MySQL, DynamoDB, NoSQL, Oracle
Analytics: Fraud Analytics, Anomaly Detection, Data Validation, Looker Studio, Machine Learning, Scikit-learn, NLP, Predictive Modeling
Cloud & tools: AWS (Lambda, S3, CloudWatch, Lex), GCP, Docker, Git
Testing & practices: JUnit, Playwright, Cypress, SOAP, Cucumber, CI/CD, Agile/Scrum, Root-Cause Analysis, Monitoring, Cross-Functional Collaboration

Experience

Redwood Software Pvt. Ltd. <i>Software Engineer India</i>	Aug 2026 – Present
- Develop Java/Spring Boot components for Tidal's 5-layer architecture, supporting distributed job execution. - Automate UI, service, integration and workload tests using Playwright, Cypress, SOAP and Cucumber. - Resolve cross-component defects with root-cause analysis and regression tests for the 2027.1 release.	
HSBC <i>Analyst Intern - Fraud Analytics India</i>	Jan 2026 – Jul 2026
- Developed Python/Scikit-learn fraud-classification models for vendor scoring and complaint triage, improving risk-identification accuracy by 18%. - Analyzed fraud data with BigQuery SQL and investigated 15+ production incidents through root-cause analysis. - Automated data-validation pipelines, reducing manual effort by 40% across fraud-analytics workflows.	
Codinoverse <i>Software Engineer Intern - Backend Systems India</i>	Feb 2024 – Apr 2024
- Built event-driven Java/Scala microservices to improve backend scalability and fault tolerance. - Connected Kafka event pipelines and REST APIs to support real-time data processing. - Optimized backend APIs and services, reducing response latency by 30%.	

Projects

PayFlow – UPI-Style Payments Backend <i>Java, Spring Boot, MySQL, REST APIs, JWT, JUnit</i>	2025
- Built a simulated UPI backend to manage accounts, transfers and transaction history. - Implemented Spring Boot APIs with JWT security, MySQL transactions and optimistic locking. - Validated concurrent transfers with JUnit integration tests to prevent double-spend races.	
Distributed Key-Value Store <i>Java, gRPC, Consistent Hashing, Docker Compose</i>	2025
- Built a distributed key-value store to preserve data availability during node failures. - Implemented Java/gRPC services with consistent hashing, quorum replication and gossip-based failure detection. - Validated data availability under node failures while quorum held; documented replication lag and recovery behavior in the README.
